[International.Security@vidisco.com](mailto:International.Security@vidisco.com)

A small and flexible solution enables communication of up to 2.4 miles in a 2.2 GHz – 4.9 GHz frequency band

Ideal for deployment in urban environments and CBRNE scenarios, Longbow guarantees fast X-ray image acquisition, reliable threat detection, and communication stability and reliability.

Longbow is comprised of two transmitters connected both to the computer and robust imaging panel to enable long-distance communication, depending on operational needs.

You choose the preferred operational frequency.

-  Approved by U.S. Department of Defense
-  Fast, secure and stable communication
-  Choose your preferred operational frequency
-  Complements Vidisco's Portable DR systems
