DISCOVER WITH CONFIDENCE

Hawk+

Pinpoint the threat with
Hawk Virtual precision grid
& enhanced AR imaging

Night vision

Enables low light / no light operation

Safety

Enhances render-safe capability

Virtual grid

Enables precise targeting solution with high accuracy

Augmented reality

Puts you at the scene

Bi-directional communication

Between field operator & commander

Make Informed Decisions Downrange on the Target

When every second counts, there's no time to waste using a standard grid. With Vidisco Hawk, conduct x-ray operations even in low light/no light conditions while maintaining a high standard of accuracy and safety. The virtual precision grid helps you accurately pinpoint the detonator's location and lowers the probability of mistakes, helping to save lives.

Fast Assessment. Effective Response.

The Hawk enables communication between the field operator and commander, increasing the effectiveness of mission assessment and response.

Enhanced Threat Analysis

Using Augmented Reality (AR) the real time image captured by the Hawk's camera is overlayed with the X-Ray image. This innovative capability gives the EOD Technician the ability to interrogate suspect IEDs like never before.

Plug & Play

The Hawk fits seamlessly into your existing Vidisco systems and sources. Simply connect the cable and proceed with acquiring the image.

The Add-On that's a Must-Have

This easy-to-use accessory, which requires minimal training, is an essential part of every EOD Technicians toolkit.
